DOG OWNER ADMINISTRATION SHEET

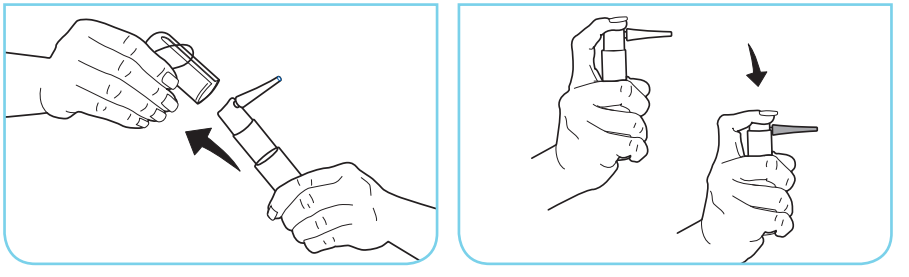

Your veterinarian has prescribed EASOTIC® (hydrocortisone aceponate, miconazole nitrate, gentamicin sulfate) Otic Suspension for Dogs. Before you begin treatment, please review the following instructions to help ensure proper administration.

Step 1

Shake the canister vigorously for at least 30 seconds. The ball bearings inside the canister help ensure the contents are thoroughly mixed.

Step 2

Remove the clear cap and prime the canister by firmly pressing down on the pump 2–3 times until the suspension fills the clear nozzle. Prime the canister only before the first use. Now you are ready to administer treatment.

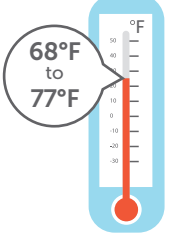

Step 3

Insert the nozzle into your dog's ear canal and firmly press down on the pump 1 time to deliver the full 1-mL dose.*

It may help to massage the medication into your dog's ear. Wipe the nozzle clear of debris, replace the cap, and store upright.

Important:
Store canister at room temperature between 20°C – 25°C (68°F – 77°F).
